2. Claims 1-15 are pending in this application.

3. This application has been filed with 8 formal drawings which are acceptable for examining purposes.

Priority

4. Acknowledgment is made of applicants' claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed is Japanese Application# 2002-291891 (date 10/04/2002).

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 1, and 14-15 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement and as based on a disclosure which is not enabling. A claimed feature of "the controller functions to: compute a lower limiting oil pressure" is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

There is a gap for the claimed feature of “the controller functions to: compute a lower limiting oil pressure”: how does it function to compute a lower limit OIL PRESSURE (using a rotation speed of the engine)?

A. Claim 14 recites a device that is programmed in a certain way (i.e., “...means for computing a lower limiting oil pressure...”what?/How?). That language structurally defines a computerized device and must be elaborated to be considered in assessing patent-ability (e.g., it has been held that computer programming with supporting of source codes, which controls the operation of the device, impart “structure”, if this requirement is not satisfied, it is just an abstract idea). The specification is rejected as not enabling one of ordinary skill to make and use the invention.

B. Dependent claims 2-13 are rejected because they inherit similar deficiency from their parent claim 1.

Conclusion

6. Claims 1-15 are not patentable.
